

Application No.: 10/726900

Case No.: 58770US002

**Amendments to the Claims:**

The following Listing of Claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims****What is claimed is:**

1. (Currently amended) A membrane module for transferring a constituent to or from a fluid, said module comprising:
  - a) at least two flat sheet membrane elements, each element having an interior portion and an outer surface, wherein the interior portion comprises a plurality of flow channels; and
  - b) at least one primary manifold that is permanently attached to the membrane elements, wherein said primary manifold is in fluid connection with the flow channels of the membrane elements, and
  - c) a space between the membrane elements;

wherein said primary manifold comprises a first fluid flow channel that carries a first fluid to or from the interior portion of the membrane elements and a second fluid flow channel that carries a second fluid to the space between the membrane elements.
2. ~~(Deleted) The membrane module of claim 1; further comprising a space between the membrane elements.~~
3. (Currently amended) The membrane module of claim 1[2], wherein said ~~primary manifold comprises means for delivering~~ second fluid comprises gas bubbles to the ~~space between the membrane elements.~~

Application No.: 10/726900

Case No.: 58770US002

4. (Original) The membrane module of claim 3, wherein said bubbles range in size from about 0.5 mm to about 50 mm.
5. (Original) The membrane module of claim 4, wherein said bubbles range in size from about 1 mm to about 12 mm.
6. ~~(Deleted) The membrane module of claim [2]1, wherein said primary manifold comprises at least one fluid flow channel that carries a fluid to or from the interior portion of the membrane elements.~~
7. ~~(Deleted) The membrane module of claim 6, wherein said primary manifold further comprises a second flow channel that carries a fluid for delivery to the space between the membrane elements.~~
8. ~~(Deleted) The membrane module of claim 7, wherein said fluid comprises a gas.~~
9. (Currently amended) A~~The~~ membrane module of ~~claim 3~~, for transferring a constituent to or from a fluid, said module comprising:
  - a) at least two flat sheet membrane elements, each element having an interior portion and an exterior portion;
  - b) at least one primary manifold that is permanently attached to the membrane elements, wherein said primary manifold is in fluid connection with the interior portion of the membrane elements; and
  - c) a space between the membrane elements;

Application No.: 10/726900

Case No.: 58770US002

wherein the primary manifold comprises perforations for receiving gas bubbles dispensed from below the membrane module and delivering said bubbles to the space between the membrane elements.

10. (Original) The membrane module of claim 9, wherein the primary manifold further comprises V-shaped or angled channels for collecting fine bubbles dispensed from below the membrane module and combining to form larger bubbles for delivery to the space between the membrane elements.
11. (Currently amended) The membrane module of claim [3]1, said module comprising a second primary manifold that is positioned at the opposite end of the membrane elements, wherein said second primary manifold is in fluid connection with the interior portion of the membrane elements.
12. (Original) The membrane module of claim 11, wherein the second primary manifold is adapted to disperse the gas bubbles that are delivered between the membrane elements, thereby preventing said gas bubbles from collecting within said module.
13. (Original) The membrane module of claim 12, wherein the second primary manifold is perforated to allow the gas bubbles to disperse.
14. (Original) The membrane modules of claim 12, wherein the second primary manifold is beveled or angled to allow the gas bubbles to disperse.
15. (Original) The membrane module of claim 1, wherein said module further comprises a spacer that separates adjacent flat sheet elements.
16. (Original) The membrane module of claim 1, wherein said module further comprises at least one secondary manifold in fluid connection with at least one primary manifold.
